

# **Receiving Card D60-12A**

# **Product specification**

Version: Ver.1.0

#### Statement

Dear user friend, thanks for choosing SHENZHEN SYSOLUTION TECHNOLOGY CO.,LTD (hereinafter referred to as Xixun Technology) as your LED advertising equipment control system. The main purpose of this document is to help you quickly understand and use the product. We strive to be precise and reliable when writing the document, and the content may be modified or changed at any time without notice.

The document is subject to change without prior notice.

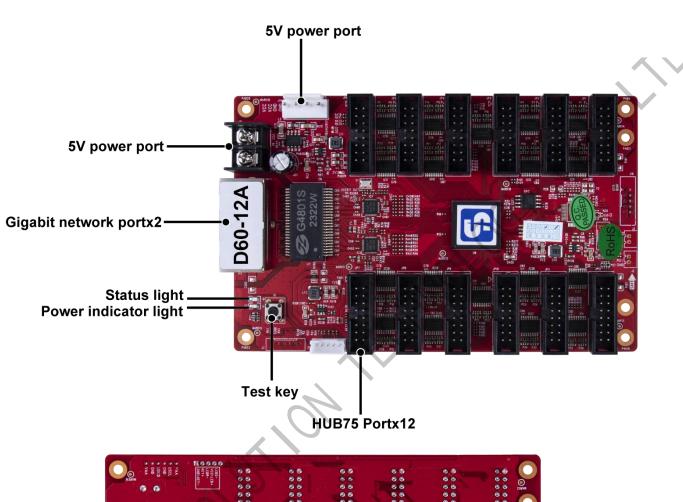

### **Product Introduction**

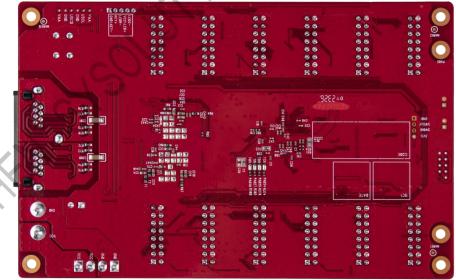

D60-12A is a standard receiving card launched by Sysolution Technology. It adopts 12 standard HUB75E interfaces and supports up to 24 groups of RGB parallel data. Load up to 512X256 pixels; It has strong processing capacity, super stable performance and high cost performance.

### **Application scenarios**

It can be widely used in the high-end display field with high requirements, and has significant advantages in the application scenarios such as LED screen rental, TV live broadcast, LED screen for large-scale activities, and high-end engineering channel projects.

### **Product Picture**

# **Load Capacity**

_,				Brightness	Chromaticity
Three lines	Data		Maximum	correction	correction
parallelism	interface/number	Drive	loading	loading	loading
(RGB)			(Pixels)	(pixels)	(pixels)
24	11110755 /12	Normal	512*256	512*256	256*320
24 groups	HUB75E/12	PWM	512*256	512*256	256*320

Number of cascade cards	Support scan line
≤1000PCS	1-64 Scan
SHEMILIEN	

# **Function Definition**

Function	Description
	1. 18Bit+: Enabling 18Bit+ on the software can
	make the LED display gray scale increase 4 times.
	It can effectively deal with the problem of gray
	scale loss of LED display due to brightness
	reduction, solve the problem of pockmarks
	caused by correction of low gray, and make the
	image more delicate in low gray.
	2. HDR: Supports both HDR10 and HLG video
Improved Display Effect	source standards; with the large band-carrying
	independent master control, inputting
100	HDR10-standard or HLG-standard video sources
(5)	can achieve a larger brightness dynamic range
	and color space, which greatly enhances the
	display picture quality and makes the picture
	more delicate and realistic.
	3. Low Latency: Reduces the latency of the video
	source at the receiver card end, with delays as
	low as 1 frame (for light boards that use driver

ICs with built-in RAM)

- 4. Quickly adjust the light and dark lines: Quickly adjust the light and dark lines on the software, quickly solve the light and dark lines of the display caused by the box and module splicing, the adjustment process takes effect instantly, simple and easy to use.
- 5. 3D function: the receiver card parameters set the frame rate 120HZ, with the independent master control that supports 3D function, turn on the 3D function in the software or the operation panel of the independent master control, and set the 3D parameters to make the screen display 3D effect.
- 6. RGB Independent Gamma Adjustment: With the independent master control and software supporting RGB independent gamma adjustment, it can effectively control the problems such as low gray uniformity and white balance drift of the display screen by adjusting "Red Gamma", "Green Gamma" and "Blue Gamma" respectively, so as to make the picture

more realistic. By adjusting "Red Gamma",
"Green Gamma" and "Blue Gamma" respectively,
it can effectively control the problems such as
uneven low gray and white balance drift of the
display, making the picture more realistic.

- 7. Support by lighting chrominance correction:with the correction software, the brightness and chrominance of each light point on the large screen can be corrected, effectively eliminating color difference, so that the brightness and chrominance of the display can reach a high degree of consistency, and improve the picture quality of.
- 8. Support multiple display effects schemes: With LedSet4.0 software to achieve refresh priority and grayscale priority effects.
- 9. Support screen rotation by 90° multiple: With the LedSet4.0 software to realize, it can rotate the screen of the receiving card by 90° multiple.
- 10. Support screen zoom function: With LedSet4.0 software, the receiving card pixel scan be scaled by multiples, and the screen can be enlarged and

	reduced.
	1. Support receiving card serial number detection:
	Cooperate with the network debugging function
	of LedSet4.0 software, the receiving card number
	and network port information will be displayed
	on the target box, and the user can obtain the
	location number and connection line of The
	receiving card.
	2. upport data interface customization : With
Improved Operability	LedSet 4.0 software, the output data of the
	receiving card can be detected and edited.
	3. Supports the construction of complex box: With
	the advanced layout of LedSet4.0 software, you
(O <sub>2</sub> )	can quickly arrange and structure the box
6	modules.
	4. Supports the construction of complex large
	screens: In the complex display connection with
	LedSet4.0 software, the boxes can be quickly
	arranged and structured arbitrarily
Improved Hardware	1. Network port hot backup : Network ports
Stability	increase the reliability of serial connection of the
•	receiving card through the loop connection of

the main and standby network cables. When one of the main and standby series lines fails, the other can ensure the normal display of the Screen. Support hardware reset function: The receiving card can restart the online hardware by itself after the hardware online upgrade is completed. Support receiving card configuration parameter readback: Can read back the current receiving card configuration parameters on LedSet 4.0. Support network cable bit error rate detection: On LedSet 4.0, the quality of the network cable **Intelligent Software** communication signal connected to the system **Upgrade** hardware can be monitored in real time to quickly judge the quality of the network cable and troubleshoot. Communication monitoring function: Monitor the working status of the receiving card in real time on LedSet 4.0.

# **Output Interface Definition**

### 24 parallel data interface definitions

JP1——JP12 Data Interface Definition

Instruction	Description	Pin	Pin	Description	Instruction
	R		2	G	RGB Data output
DCD Date	В	3	4	GND	Ground
RGB Data	R	5	6	G	RGB Data output
output	B	7	8	E	
Line decoding	A	9	10	В	Line decoding signal
signal	С	11	12	D	
Shift clock output	CLK	13	14	LAT	Latch signal output
Display enable (remarks1)	OE	15	16	GND	ground

Note 1: Pin 15 is the display enable pin. When PWM chip is used, it is GCLK signal.

#### J16 Interface definition

Description	Pin	Pin	Description
+5V	1	2	GND
FLS_CS	3	4	FLS_DO
FLS_CLK	5	6	FLS_DI
PROGRAM_B	7	8	mCONF_DONE
GND	9	10	+5V

# **Indicator Description**

Indicator	Location	State	Description
		Flashes evenly and slowly	The receiving card works normally, the network cable is connected normally, at there is no DVI signal input.
Status indicator (green)	U1	Flashes evenly and quickly	The receiving card works normally, the network cable is connected normally, a there is a DVI signal input.
	_	Off	No Gigabit signal
		3 flashes quickly at intervals	The receiving card works normally, the network cable circuit is in connection, a
			there is a DVI signal input.
Status indicator	U3	On	Normal power supply

### **Dimensions**

Unit: mm

## **Working Parameters**

	Input voltage	DC3.5-5.5V
Electrical Parameters	Rated current	0.6A
	Rated power	3W
Marking anying page	Working temperature	-20°C-70°C
Working environment	Working humidity	10%RH-90%RH
Storage environment	Working temperature	-25°C ~ 125°C
Board size	144.02mn	nX91.2mm
Net weight	100	D.8g
Certification Information	RoHS Compliant,	CE-EMC Compliant
SYSON		

### **Note**

- 1. Must be used in accordance with this usage requirement.
- 2. Installation and commissioning must be done by professionals and must be anti-static.
- 3. Pay attention to waterproof and dust removal
